

One Proportion

Parameter: p
Point est. = \hat{p}

Hypothesis Test

Hypotheses

- $H_0: p = p_0$
 $H_a: \textcircled{1} p < p_0$
 $\textcircled{2} p \neq p_0$
 $\textcircled{3} p > p_0$

Test Statistic
Random Variable
(Assuming H_0)

$$Z = \frac{\hat{p} - p_0}{\sqrt{\frac{p_0(1-p_0)}{n}}} \sim N(0,1)$$

Observed
test
Statistic

$$z_{\text{obs}} = \frac{\hat{p}_{\text{obs}} - p_0}{\sqrt{\frac{p_0(1-p_0)}{n}}}$$

P-value

- $\textcircled{1} P(\hat{p} \leq \hat{p}_{\text{obs}}) = P(Z \leq z_{\text{obs}})$
 $\textcircled{2} 2P(\hat{p} \geq \hat{p}_{\text{obs}}) = P(|Z| \geq |z_{\text{obs}}|)$
 $\textcircled{3} P(\hat{p} \geq \hat{p}_{\text{obs}}) = P(Z \geq z_{\text{obs}})$

Conditions for Distributional Approx.

(Assuming H_0 is true)

1. Independent observations
2. Number of expected successes & expected failures at least 10

$$[n p_0 \geq 10 \ \& \ n(1-p_0) \geq 10]$$

Confidence Interval

Formula for CI

$$\hat{p}_{\text{obs}} \pm z^* \sqrt{\frac{\hat{p}_{\text{obs}}(1-\hat{p}_{\text{obs}})}{n}}$$

Conditions for Distributional Approximation

1. Independent observations
2. Number of observed successes and observed failures at least 10

$$[n \hat{p}_{\text{obs}} \geq 10 \ \& \ n(1-\hat{p}_{\text{obs}}) \geq 10]$$
